ROLE-SPECIFIC OPERATING ARTIFACT

Automation Load Test

Use this one-page review before committing a workflow to production. Score evidence, not enthusiasm.

Field truth	Have we observed the real workflow, exceptions, artifacts, timing, and user burden?	☐ ☐ ☐ ☐ ☐
Outcome owner	Is one business owner accountable for the result and one service owner accountable for operation?	☐ ☐ ☐ ☐ ☐
Decision rights	Are approvals, overrides, exception authority, and escalation paths explicit?	☐ ☐ ☐ ☐ ☐
Data continuity	Are sources, required fields, evidence, quality rules, retention, and traceability defined?	☐ ☐ ☐ ☐ ☐
System joint	Is the interface between ERP, Microsoft 365, and field tools governed, testable, and recoverable?	☐ ☐ ☐ ☐ ☐
Human authority	Is it clear what AI or automation may do and what remains a human decision?	☐ ☐ ☐ ☐ ☐
Economic baseline	Do we know current cycle time, handling, rework, delay, exception cost, or another meaningful baseline?	☐ ☐ ☐ ☐ ☐
Adoption path	Does the mechanism remove enough burden to displace the workaround, with training and feedback built in?	☐ ☐ ☐ ☐ ☐
Production support	Are monitoring, errors, retries, access, runbook, change control, recovery, and retirement covered?	☐ ☐ ☐ ☐ ☐

BUILD / SCALE
Evidence is strong across layers; proceed with bounded production scope and instrumentation.

STABILIZE FIRST
Value exists, but ownership, data, process, control, or support cannot yet carry production load.

OBSERVE MORE
The problem, baseline, user burden, or decision is not understood well enough to automate responsibly.

REVIEW RECORD

Workflow	Outcome owner	Service owner	Decision

Weakest layer	Evidence to collect or mechanism to repair	Review date

This artifact is a candidate-created hypothesis for discussion. It does not represent Delaware Valley Companies' current internal process.
